

## Architectural Textiles: Tent Bands of Central Asia

This exhibition catalog, *Architectural Textiles: Tent Bands of Central Asia* by Richard Isaacson, is a ground breaking study. Nothing like this has ever been published before. Isaacson explores the use of the tent band as the functional support for the trellis tent (yurt) and its decorative role. This book includes the technical analysis of 32 objects as well as detail images of all the bands. The final section of the book allows the reader to see the full design of these bands across a three page spread, which average 1 x 52 in size.
