

## Science Focus: Looking into Science 3, Year 9: The Salters Approach (Science focus: the Salters approach)

The Salters team at the University of York believes that science teaching should be founded on materials and experiences familiar to pupils. Key scientific concepts are drawn out from contexts which really mean something to pupils. For example, using shampoos as a starting point leads to the need to consider acids and alkalis; drinks provide the context for the particulate theory; monitoring a premature baby introduces aspects of information technology. This book for Year 9 includes non-practical activities which aim to help establish the need to introduce scientific ideas. It is part of a Key Stage 3 course based on the Salters Foundation Units which have been used in trials in over 400 schools.
