

Reducing the Risk of Cancers

This book has been produced as part of the European Commissions programme Europe Against Cancer and emerges from the Lisbon Colloquium held in February 1989. The book includes previously unpublished papers and the reports of major debates about cancer prevention. Experts from across Europe address the major issues: what are the best strategies for prevention? where is research most urgently needed? and how can we get the essential educational messages across? All agree that concerted action now could create a healthier society in which cancers are a far less prominent cause of death.
