CRS Report for Congress: Global Climate Change: Market-Based Strategies to Reduce Greenhouse Gases: May 2, 2002 - IB97057

Congressional Research Service: The Library of Congress, Larry Parker

The possibility that human activities are releasing gases, including carbon dioxide (CO₂), at rates that could affect global climate has resulted in proposals for national programs to curtail emissions. An international framework for specific reductions in greenhouse gases was negotiated at a meeting in Kyoto in December 1997. Concern about costs has encouraged consideration of CO₂ reduction proposals that employ market-based mechanisms. The passage in 1990 of a tradeable allowance system for sulfur dioxide (SO₂) control in the United States provides a precedent for such mechanisms. The two mechanisms receiving the most attention are a tradeable permit program (similar to the acid rain program) and carbon taxes.....
