CRS Report for Congress: Climate Change: Action by States To Address Greenhouse Gas Emissions: January 18, 2007 - RL33812

Congressional Research Service: The Library of Congress, Jonathan L. Ramseur

In the absence of a federal climate change program, a number of states have taken actions that directly address greenhouse gases. States efforts cover a wide range of policies, from outlining possible strategies to setting mandatory greenhouse gas emission standards. Although much of the early activity was largely symbolic, the more recent state actions have been more pragmatic. The states motivations may be as diverse as the actions themselves. Some states are motivated by projections of climatic changes, while others view their policies as economic opportunities. States also point to the potential co-benefits of reducing greenhouse gases: improvements in air quality, traffic congestion, and energy security. Another driver behind state action is the possibility of catalyzing federal legislation. Most of the states have shown at least a basic interest in climate change issues. Forty-two states have conducted greenhouse gas inventories; 30 states have either completed or are in the process of preparing climate change action plans; 12 states have set statewide greenhouse gas targets. However, only a small number of states have implemented or are creating mandatory emission reduction programs. The most significant developments have come from California and from a group of states in the Northeast. The Regional Greenhouse ...
