

Disappearance of Darkness: Photography at the End of the Analog Era

Over the past decade, photographer Robert Burley has traveled the world documenting the abandonment and destruction of film-based photography, namely, the factories where film was produced and the labs that developed it. Burley's atmospheric large-format photographs transport viewers to rarely seen sites where the alchemy of the photographic process was practiced over the last century—from the Polaroid plant in Waltham, Massachusetts to the Kodak-Pathé plant in Chalon-sur-Saône, France, the birthplace in 1827 of photography itself. As both fine art and documentary, *The Disappearance of Darkness* is an elegiac reflection on the resilience of traditional art forms in the digital era and a vital commemoration of a century-old industry that seems to have disappeared overnight.
