

From Cans To Cars - How Designers Fail Us In Almost All Things We Use Everyday

This book is an experiential narrative on everyday things the author used; it is a critique on their design but more importantly an explanation aimed at improving the design that could lead to a better experience with them. With a Ph.D. in Psychology (Human Factors) and long experience in designing for the users, the author first narrates the usage experiences from a user perspective and then brings out his human factors expertise in offering simple design solutions where possible.
