G is for Genes: The Impact of Genetics on Education and Achievement

G is for Genes shows how a dialogue between geneticists and educationalists can have beneficial results for the education of all childrenand can also benefit schools. teachers, and society at large. Draws on behavioral genetic research from around the world, including the UK-based Twins Early Development Study (TEDS), one of the largest twin studies in the world Offers a unique viewpoint by bringing together genetics and education, disciplines with a historically difficult relationship Shows that genetic influence is not the same as genetic and determinism that environment matters at least as much as genes Designed to spark a public debate about what naturally-occurring individual differences mean for education equality
