

Greenhouse construction; a complete manual on the building, heating, ventilating and arrangement of greenhouses, and the construction of hotbeds, frames and plant pits

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1894 Excerpt: ...cleaning is small and easily cleaned, the actual trouble would be very slight, and although the flues of some heaters are practically self-cleaning, their heating surface may be less effective, which would more than counterbalance the cleaning required by the other. So far as circulation goes, the vertical tube tends to reduce friction, and to this extent it is desirable. On the other hand, the friction produced by one circuit of the water in a horizontal section is so slight that it is often more than counterbalanced by the increased efficiency of the horizontal fire surface. The drop tubes used in many boilers present a very good fire surface, as the ends are directly over the grate, and, as the water circulation is vertical, they form a very effective portion of the heater. When large tubes are used there is little danger of their filling up with sediment, and the principal objection that can be urged against them is that the water cannot be drawn off from them. Another thing that it is desirable to secure, if possible, is the bringing of the products of combustion, as they are about to leave the heater, in contact with tubes or sections containing the return water. It can be readily seen that water at 175 coming back in the returns, can still take up heat from gases that have been in contact with iron surfaces that are 200 or more. In this way considerable heat will be saved that would otherwise pass up the smoke pipe. 3. ARRANGEMENTS FOR CLEANING AND FIRING. It is self-evident that anything that adds to the convenience of a heater will be desirable, and the matter of shaking, dumping, and regulating of drafts should be considered. Of especial importance, however, is the matter of cleaning the flues. Unless there is

a great loss of heat, a heater cannot...
