Attention-deficit hyperactivity disorder (ADHD) is the most commonly studied and diagnosed psychiatric disorder in children, affecting about 3-5% of children globally and diagnosed in about 2-16% of school aged children. Additionally, it is a chronic disorder; 30-50% of individuals diagnosed with ADHD in childhood continue to be symptomatic in adulthood. However, with early diagnosis, medical management and behavioral treatment has been most effective when treating patients with ADHD at any age. Assessment scales are critical and essential tools for the diagnosis and treatment of patients with ADHD. This book has been designed to provide clinicians with a quick guide to the most effective assessment scales in ADHD for patients at any age. Additionally, the scales are used in clinical trials to evaluate drug efficacy.
