

At Risk? Avoid Diabetes by Recognizing Early Risk - A Natural Medicine View

Diabetes is largely avoidable. Yet, every ten seconds two individuals are diagnosed and one person dies of diabetes or related complications. Diabetes shortens life expectancy by ten to twelve years. On the other hand, eight to fourteen years before a diagnosis the body starts showing warning signs. Research links over fifty health complaints to an increased risk of diabetes—a risk that affects one in two people worldwide. The best person to recognize that risk is you. At Risk? shows you what to look for. It helps you understand how your body functions and enables you to proactively avoid diabetes.
