

Junk DNA

In a world about to be turned upside down by the Human Genome Project, unconventional sex therapist Regina incorporates stolen pharmaceuticals into her work. Not one of her best ideas; all the women she treats develop a terrifying aversion to children. Disillusioned, she embarks on a work of scientific satire, a living exhibition of genetic poetry starting with mice and working up the evolutionary scale. Lucy, Reginas ten year old neighbour, is a dyslexic, creative genius, born into a family on the wrong side of dysfunctional. As society starts to fall apart, Lucy quits school, orphans herself, and sets to work as Reginas assistant. Lucy becomes a very powerful little girl, and life gets more twisted by the day. Finally, when human beings have tinkered with nature once too often, Junk DNA reaches an apocalyptic climax.

97% Of Your Genome Is Junk DNA - Curiosity Junk. Barren. Non-functioning. Dark matter. Thats how scientists had described the 98% of human genome that lies between our 21000 genes, **Three reasons why junk DNA makes evolutionary sense - Scientific** **Junk DNA tells miceand snakeshow to grow a backbone** Junk DNA. In molecular biology, junk DNA is a collective label for the portions of the DNA sequence of a chromosome or a genome for which no function has In genetics, the term junk DNA refers to regions of DNA that are noncoding. DNA contains instructions (coding) that are used to create proteins in the cell. However, the amount of DNA contained inside each cell is vast and not all of the genetic sequences present within a DNA molecule actually code for a protein. **How much junk is in our DNA? - The Conversation** The late] Dr. Susumu Ohno, writing in the Brookhaven Symposium on Biology in 1972 in the article So Much Junk DNA in our Genome is credited with **Transposable Elements (TEs): Not Junk DNA? Some noncoding DNA is transcribed into functional non-coding RNA molecules (e.g. transfer RNA, ribosomal RNA, and regulatory RNAs). **Functions of Junk DNA - News Medical** Is there treasure in the DNAs so-called junk pile?
