

Type Image

One of the most comprehensive surveys of type ever published, Type Image showcases contemporary works that challenge the type/image divide. Letters, words, and phrases in Type Image are playfully crafted into landscapes, portraits, objects, or textures and patterns. Attention is paid to punctuation, pictorial typefaces, and designers takes on the contemporary mainstream use of emoticons. The accompanying text illuminates the history and relevancy of images composed from type. The projects are vibrantly three-dimensional, with sculptural wordplay from jewelry design to signage to typographic landscapes envisioned in the middle of roads and neighborhoods. Hanging apples are carved with curled phrases, Garamond lettering is literally built up out of sand and then photographed being eroded by the rising tide, and cartographic maps are decoratively composed of neighborhood names-illustrating the creative potential of typographic imagery.
