

Sport & Exercise Medicine: Common Medical Conditions

A pocketbook for sport and exercise medicine practitioners. A quick reference easy to use guide to the most common conditions you may encounter in surgery. The book is laid out into bodily sections to make a diagnosis easier, for a heart condition select the Heart Chapter, the same applies for shoulder, knee, foot or neck etc. Nature of the work Sport and Exercise Medicine (SEM) is concerned with the management of medical conditions and injury in those who participate in physical activity. The role of the specialty has also developed to include expertise in exercise advice, prescription and promotion for general health and in those with chronic medical problems. It is a newly recognised medical specialty, achieving specialty status in 2005. Working in sports and exercise medicine The role of a specialist in SEM is varied. Current practitioners are employed by the NHS, academic institutions, private sector, universities, the armed forces, sporting teams, organisations and national governing bodies. The future employment of doctors in the specialty will almost certainly involve a portfolio career working for several employers. Common procedures/interventions Training in SEM will give exposure to a variety of clinical procedures and interventions, including:

- Clinical history and physical examination
- Musculoskeletal injection
- Biomechanics and gait assessment
- Musculoskeletal ultrasound
- Compartment pressure measurements.
- Spinal injection skills
- Cardio-pulmonary exercise testing
- Physical fitness and arthropometric assessment
- Exposure to and potential to deliver alternative therapies, including osteopathy and western medical acupuncture

This is a must have book for students and other healthcare professionals. This edition is completely up to date with the very latest information and includes

national guidelines on treating major diseases seen in primary care.
