

Natural Gardening in Small Spaces

With the growing recognition that a wisely and sensitively planted garden has a lot to offer to wildlife and the food web, more and more people are looking for ways to make their gardens environmentally friendly. However, gardeners have tended to assume that they need a lot of space to create habitats for wildlife and to evoke wild and natural places. In *Natural Gardening in Small Spaces*, renowned plantsman Noel Kingsbury refutes that presumption, showing how even in a small garden you can create a sustainable ecosystem that looks great --- and, once established, largely looks after itself. More than 150 glorious photographs of small natural gardens provide visual confirmation of Noel Kingsbury's contention that even the smallest garden can provide a natural haven.
