

Stencil Poster (36 Chambers Series)

The second volume of the stencil techniques of this Roman duo. From dots to line, from mid-sized images to over-sized canvases, their work always maintains an orientation toward the street. Totally devoted to the space that surround and contains their works, they find their vital inspiration from the street. This is the emerging Italian style. Part of 36Chambers project which includes artists like WK Interact, Nick Walker, Mike Giant, Logan Hick, JonOne and Mai Lucas. This book is a part of the highly desirable 36 Chamber Series box collection and shares in the preceding prestige. Sten and Lex are entering the international art market, which makes this book a must-have for those who are interested in keeping current with new trends in contemporary art. The book presents a collection of never before seen works. The seventeenth chapter of Dragos 36 Chambers Series Stencil Poster by Roman artists Sten and Lex represents the most recent developments in their style. Sten and Lex, who by now are renowned world wide for their work both on the street and in various galleries, began working together in 2001. Since then they have continued to refresh and reinvent the application of their medium by introducing new methods and developing their style from the early days of the Hole School to what we see today, which they refer to as the Stencil Poster technique. Their innovative approach toward the standard stencil has received much deserved attention from gallerists, curators, and collectors from around the world. In addition to their growing international acclaim, Stencil Poster is their second book published by Drago. A brief statement from the artists compliments the eighty-three images in the book, each page presents the reader with an original piece made exclusively for the publication. The subjects of their work come from photographs of nameless faces found as a

result of their meanderings through different outdoor markets in cities all over the world. The lines that form the images, when seen from a close proximity appear to be a visual study in black and white, but from afar magically expand and contract to create a complete vision.
