

The Cancer Patient and Supportive Care: Medical, Surgical, and Human Issues (Cancer Treatment and Research)

During the course of editing *Supportive Care in Cancer Therapy* (Martinus Nijhoff Publishers, 1983), it became apparent that several topics would have to await a second volume. Furthermore, development of new information and evolution of ideas continues. This volume continues the intent of the first to present reviews of issues relating to supportive care, and to identify areas where further definition and further research is needed. The physician reading this volume will find the contents thought-provoking. In addition to reviews authored by physicians, there are chapters authored by non-physicians, who present a different perspective and a different style of writing. Reverend Bigler writes from his long experience as a chaplain for cancer patients, and tries to identify the changes that take place in the personality of the chaplain who works with dying patients. Ms. Killian and Ms. Powell try to describe what an Oncology Nurse is, rather than what one does. Attorneys Reese and Price present a very practical summation of issues which face the cancer patient, and their chapter could easily be copied and offered to one's patients; furthermore, this chapter gives direction to the physician who is frequently called upon for advice regarding issues which lie entirely outside his/her formal training. Excellent reviews on more medical subjects are here. *Cancer in the Elderly* should provoke oncologists to re-examine their approach to the geriatric patient.
