

Macro Thinking: The Last Business Book You'll Ever Need

All companies go through cycles. An up cycle is evidenced by growth, vibrancy and the optimization of potential. A down cycle means your products are no longer must haves, your customers are being siphoned off by competitors and your employees are leaving for greener pastures. Being successful and staying that way is not a question of luck or timing; it depends on your focus. If you focus on the wrong things, you lose. If you focus on whats important, you win. If your efforts to regain your competitive edge are failing to produce the desired results, its time for a different approach. Its time to deal with the causes of your business problems, not just their symptoms. Regardless of how successful your business has been in the past, if it is now stuck in neutral (or even in reverse) you need to find a way to start going forward again. Although improving operating efficiency, marketing or sales techniques are important to the success of any business, they are not fundamental to a companys success especially if the real problem is that customers no longer want what youre offering or you consider customer service as a cost center rather than as a value generator. Macro Thinking takes the business owner beyond the symptoms, identifying the critical elements that every business regardless of size, industry, or location must have to achieve and maintain success. If you own or manage a business, it will help you: Grow your business and generate more profit Get your customers to help you become more successful Develop and execute a plan to get you from where you are to where you want to be Establish the right support to achieve your goals Rebuild your business success by refocusing on the fundamentals. The road back to success begins with Macro Thinking.
