Not illustrated. 1876 Excerpt: ...in order to relieve the head from its fixed condition, and favour its descent., Such an operation obviously requires quite as much dexterity as the forceps; while, if we bear in mind its comparatively slight effect, and the possible risk of injury to the maternal structures, we must admit that vo.nTmTM the disuse of the instrument in modern practiceI1bIa, IUM is amply justified. Is some. The vectis may, however, find a useful application when times of employed to rectify malpositions, especially in certain cases correcting of difficult occipito-posterior presentations. This action of the tionsoT instrument has already been considered vol. i. p. 377), and, the head, under such circumstances, it may prove of service where the forceps is inapplicable. When so employed it is passed carefully over the occiput, and, while the maternal structures are guarded from injury, downward traction is made during the continuance of a pain. So used, its application is perfectly simple and free from danger, and for this purpose it may be retained as a part of the obstetric armamentarium. The fillet. The fillet is the oldest of obstetric instruments, having been frequently employed before the invention of the forceps, and even in the time of Smellie it was much used in the metropolis. It has since completely fallen out of favour as a scientific instrument, although its use is every now and again advocated, and it is certainly a favourite instrument with some practitioners. This is to be explained by the apparent simplicity of the operation, and the fact that it can generally be performed without the knowledge of the patient, the Fig. 155. latter, however, being; one strong reason why it should not be used. The fillet
